

HOT TAP ACTIVITY

Hot tapping or pressure tapping, is the method of making a connection to existing pipe or pressure vessels without the interruption of emptying that section of pipe or vessel. This means that a pipe or tank can continue to be in operation whilst maintenance or modifications are being done to it.

On Tuesday August 25, 2015 the Terminal Modernization Program will use a “hot tap” on the water line feeding LAX to install a valve. This will be performed between the hours of 0100 hours and 0400 hours. Hensel Phelps, LAWA Airports Development Group, and Facilities Maintenance Group believe this to be a low risk activity that has been performed with very high rates of success.

In the unlikely event of reduced water pressure and/or an interruption to water flow please call the ARCC at 424-646-5292.

For comments or questions regarding this Advisory, please contact Terminal Landside Manager, Viji Prasad at yprasad@lawa.org

Issue Date: August 20th 2015

Subject: HOT TAP ACTIVITY

* The LAX Operations Advisory will be posted on LAWA’s Airport Operations web site and can be retrieved at <http://www.lawa.org/airops.aspx>
